2.800

units plus accessories

A total of

5.800

units plus accessories will be delivered

Shipment to

40

locations

16

Circlon employees were involved in staging and rollout

CHALLENGE

Many parallel processes: As the software was being adapted on sample devices, production of the subsequent hardware with Deutsche Post's own branding commenced at the same time. The staging took place parallel to the rollout planning and the material for production was ordered simultaneously with the preparation of the contract.

SOLUTION

Thanks to the short lines of communication within the organisation and the trusting cooperation between DPAG, Circlon and M3 Mobile, the project was completed in a very short time. The Circlon I group has been carrying out large rollouts as projects with a dedicated project manager as Single Point of Contact (SPoC) since 2003. All relevant information is collected centrally and transmitted in a coordinated manner to the respective partners involved. Targeted communication and forward planning enable us to identify delivery bottlenecks at an early stage and make adjustments during the process.

DEUTSCHE POST

Deutsche Post AG is a listed logistics and postal company headquartered in Bonn. Since 2015, the group has been operating under the name Deutsche Post DHL Group; the national postal business is managed under the brands "Deutsche Post" and "DHL", the international logistics business under the brand "DHL".

WHY CIRCLON

We provide the largest transport and logistics companies, such as Deutsche Post, with intelligent solutions for complex data collection processes. This sector in particular requires large device pools with robust handheld solutions and powerful software - for secure positioning.

All this is necessary to ensure secure positioning and shipment tracking in real time.

Reaching the destination together with strong partners like M3 Mobile:

At Circlon I group we work together with manufacturers such as M3 Mobile to provide industry know-how are the hallmarks of the Circlon I group. We leave nothing and no one behind.

HARDWARE HIGHLIGHTS

Robust mobile computer with smartphone look: The familiar and user-friendly interface of the SM15 from M3 Mobile makes the mobile computer ideal for employees who scan barcodes in large numbers - thus perfect for Deutsche Post. As a result, processes are simplified and productivity is significantly increased. In addition, the Android operating system gives managers the opportunity to install a customised selection of apps for employees.

Optimally adapted: the smart mobile computer is protected against dust and moisture in accordance with IP65 and can withstand drops from a height of up to 1.8 m. This makes it particularly robust and absolutely suitable for everyday use. Its full HD display with scratch- and shock-resistant Gorilla Glass is easy to operate - whether with stylus, gloves or even wet fingers. "Win Win" for daily use in sectors such as the one of Deutsche Post. Good to know: The SM15 is available in three versions. This means we can offer the right solution for almost any requirement.

MANAGED SERVICE HIGHLIGHTS

The mobile device rollout enables a seamless transition to new hardware and software. Our experienced project managers have a firm grip on highly dynamic processes. Because we are always close to the customer and cover almost the entire requirement profile. Our motto: Plan first, then deliver. We guarantee reliable processing from a single source.

Let us increase the efficiency of
your logistics processes together.

I would be happy to show you
which options are best for you.
